Acknowledge

As we understand that the Project is a step-by- step learning environment that closely simulates the classroom and Lab based learning environment into actual implementation. It is a project implementation at your fingertips!! An electronic, live juncture on the machine that allows you to.

- ✓ Practice step by step i.e. ladder approach.
- ✓ Build a larger more robust application.
- ✓ Usage of certain utilities in applications designed by user.
- ✓ Single program to unified code leading to a complete application.
- ✓ Learn implementation of concepts in a phased manner.
- ✓ Enhance skills and add value.
- ✓ Work on real life projects.
- ✓ Give a real life scenario and help to create applications more complicated and useful.
- ✓ Mentoring through email support.

We would like to send a great thank to our professor, Mr Le Thanh Nhan and others student for the adorable supports during the time in project.

Beside several mistakes we had made in the project, we hope to have more opportunities to widen our knowledge in web-building world.

We also thank you so much for your information and the “demo” project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning anything as much as we can be more successful in the future.

Your Sincerely,
Team Group 05.

Synopsis

The Objective of this program we aim is to give a sample project to work on real life projects. These applications help us build a larger more robust application. The objective is not to teach us front-end or back-end technology but to provide us with a real life scenario and help us create basic applications using the tools.

Hence, we can revise the chapters before we start with the project. This project is meant for students like us who have completed the module of Semester II, as well as special subjects those are Java and PHP. These programs should be done in the Lab sessions with assistance of the faculty if required.

The website (in this project) is a world that brings everything about online bookstore which enables customer to choose the favourite book and purchase via their own computer and smartphone without going to store by vehicle.

It is very essential for us that will have a clear understanding of the subject. We think we should go through the project and solve the assignments as per requirements given

Review 01

DesignPlan: OnBookStore	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 21/03/2023	Version 1.0	Page No: 1 of 57

Problem Definition

OnBookStore is one of the business entities major in supplying a wide range of well-known books around the globe. Beloved customers can receive a diverse and rich collection of e-books, from literary, economic, life skills to other types of books. We are committed to giving the best reading experience, fair price, and with the best customer service to all customer who want to have a miracle experience with our business.

To meet the demand's readers, we tend to update more categories and books to create a variety of choices for customer such as comic book, anime, and so on.

As a high-standard service, we always find the best way to provide more services and special promotions for customer and create the unique which does not exist in any online commercial platform like our company.

Based on the need stated in the Project Overall, we design an application that will provide the features and functionalities as the followings:

- ✓ Provide functions for member register.
- ✓ Provide information of the book to customers.
- ✓ Provide cart function so that registered members can order products.
- ✓ Receive comments from customers and members to improve service quality as well as product quality.

We also provide functions for webmaster to do the management system:

✓ Webmaster can add, update book's information quickly and accurately.

✓ Webmaster can manage members and their feedbacks.

✓ Webmaster can manage report statistics.

The Role of User and Webmaster:

1. User:

✓ Can register as a member and manage personal account.

✓ Can search information of books.

✓ Can view and buy books

✓ Can give feedback, comment, rate about books.

✓ Can view their orders.

2. Webmaster

✓ Can add / edit books.

✓ Can view customer's information or deactivate an account.

✓ Can view all orders.

✓ Can view report statistics.

Customer Requirements Specifications

User:

Input:

- Member registration data.
- Book's data.
- Order selected books
- Feedback about books

Process:

- Process customer registration data.
- Search products from database by categories, name.
- Process customer orders.
- Process book's feedback.

Output:

- Notification of successful registration / failure.
- Book information.
- Notification of successful order.
- Notification of successful feedback

Webmaster:

Input:

- Administrator login data.
- Book data to be edited.
- Member's data to be edited
- Order data to be edited.

Process:

- Process login
- Add / edit books
- Process data of members.
- Edit orders.

Output:

- Notification to login success/failure.
- Notification to add / edit books success / failure.
- Notification to edit member account.
- Notification to update orders.
